Professional Summary

Support enterprise Threat and Vulnerability Management Program within CSI to create efficiency for organization. Manage vulnerability management solution as well as lead other threat and security initiatives. Additionally, I manage the GRC solution which holds use cases supported across multiple teams.

Utilize my technical skills to stay engaged with my team members by scripting and reviewing code along with suggesting configuration changes they may need to make. I enjoy working in a challenging environment which is continuously evolving.

Business Experience

Computer Service Inc.   **05/2022 – Present**

St Louis, MO

Manger – Information Security

- Lead the Threat & Vulnerability Management team at CSI. This team supports several business processes, which provides visibility to CSI's attack surface.

- Management of enterprise vulnerability scanning through Qualys scanning solution.

- Collaborate with cross-functional teams to promptly remediate security vulnerabilities and alerts found through Prisma Cloud.

- Work with application developers to implement SAST scanning though pipelines and fail builds based on policies set up within Veracode.

- Work with direct reports to deliver cybersecurity awareness training during Cybersecurity Awareness month. Additionally, my team handles setting up KnowBe4 phishing campaigns and communicating with individuals who have failed.

- Integrated and deployed SALT security to monitor for malicious API endpoint usage and communicate the exposure of sensitive data in internally developed endpoints.

- Individuals who support the Archer GRC platform directly report to me and provide routine updates about the platform. Regularly I develop third party integrations to automate and simplify workflows.

- Lead engagements with third party penetration testing firms and individuals submitting bug bounties. My team then validates and works with other business units to identify remediation plans.

- This team also performs DAST scanning and manual security assessment against internally developed applications.
